Proximal Humerus 'Philos' Locking Plate

Categories: Orthopaedic Implants, Locking Plates

Summary

Treatment of comminuted and complex/displaced proximal humeral fractures, especially in osteoporotic bones, has been a big challenge. This is where our ‘PHILOS’ locking plate comes to the rescue. It is a locked compression plate which requires minimal invasion and allows indirect fracture reduction lowering the possibilities of AVN, immobilization time and thus prevents the possibility of a frozen shoulder. It is a low profile-plate with proximal fixed angled screws which make it a fixating device with high stability in osteoporotic bones. Furthermore, with ISO 9001-2015; ISO 13485-2016 certification and the WHO-GMP compliance we can ensure the best quality and medical safety of our product.
